

RICHMOND

MERINOS

Flock No. 5021

2024 ON PROPERTY SALE

120 RAMS

AUGUST 2023 DROP

1:00PM TUESDAY 1st OCTOBER

INSPECT FROM 10:00AM

Interfaced with

 AuctionsPlus

Buy and Sell stock nationally

SELLING AGENTS: ELDERS YOUNG

CONTACTS: Aaron Seaman 0488 915 315 Andrew Miller 0417 660 260
Nick McNamara 0419 643 941 Rachel Pritchard 0472 801 869

REBATE: 2% to outside agents provided they are introduced prior to the sale and settle within 7 days.

WOOL TESTS: All wool tests courtesy of New England Fibre Testing. Rams tested with 4.5 months wool on August 28th. This information should be used as a guide only and Richmond accepts no responsibility for their accuracy.

ASBV's: ASBV figures are calculated under the national recording system Sheep Genetics . ASBV figures are continually changing as new data is entered in the system and the figures in the sale catalogue may differ slightly to those presented on sale day.

SHEARING: Rams shorn on April 5th 2024.

DELIVERY: Collection of rams on sale day is preferred. Delivery at a later date can be arranged although no responsibility will be taken for death or injury of rams left on the property. It is recommended that rams are insured on the day.

Stud History

The “Richmond” flock was founded in 1994 with the purchase of pure Severn Park blood ewes and rams. In 2001 on the advice of our sheep classer Charlie Massy. We decided to create a nucleus ewe flock and implement a laproscopic insemination program to breed replacement rams. In 2004 we were accepted by Dr Jim Watts as a participating stud within his breeding group and throughout this time we worked closely with Dr watts learning and understanding the biological drivers of fibre production and developing a unique multi purpose futuristic merino type with advanced fertility and carcass traits, a “new wool fibre” and skin type that allows and embraces a non mulesed and sustainable future.

Over time we have developed the stud to approximately 650 ewes. Since the studs inception genetics have predominately come from Severn Park in the form of semen, rams and stud ewes. The bloodline has proved to be very successful and suitable within our environment. In June 2008 we expanded our stud numbers by purchasing 122 in-lamb stud ewes at the Severn Park dispersal sale. In recent years judicious introduction of outside genetics from a number of bloodlines have been infused to help create the current Richmond phenotype.

The Richmond Phenotype

The sheep we aim to breed is a balanced dual purpose animal compatible with an increasing environmentally conscious consumer base without compromising productivity.

There are five components that control our selection procedure and steer us towards this vision:

1. Skin structure - The sheep must be plain bodied with no visible wrinkle evident possessing a skin that is loose and supple. The skin is the engine room of fibre production and if the follicle structure is correct the animal will produce large quantities of fine micron, superior processing fibres.

2. Fibre - The wool must be silky soft, highly aligned, deeply crimped and forming fibre bundles as opposed to traditional thick staples. It should be white and free of suint ,evenly but not over nourished and very long.

3 Growth - We select for rapid early weight gain but not necessarily extreme adult weights. We want lambs that mature early and meet specific markets. They must be well muscled with good fat cover. It is our policy to only use sires with high ASBV's for these traits.

4. Fertility - We consider fertility to be a major profit driver under current market conditions. High lambing percentages enable self replacing flocks to place more selection pressure on their breeding flock resulting in greater genetic gain. At Richmond, all dry ewes are culled and a strong emphasis is placed on twinning . This has resulted in all stud and commercial ewes (including maidens) regularly weaning 120% lambs on joining numbers.

5.Conformation - It goes without saying that all our sheep must be structurally correct and this is the first thing we look at in the classing race. We also like our sheep to have long bodies, good neck extension with a triple wedge body shape and good ground clearance.

MARKET TRENDS - PRESENT AND FUTURE

There are three market trends that drive our breeding direction. All three have gradually gained momentum across a world wide consumer base and we feel they will become increasingly important as we look towards our vision of the future merino.

1. Elite Fibre Production - In the 1950's everyone wore wool and there were very few options available particularly for heavy garments. Everything from overcoats to underwear was made of wool and there was a strong market for all grades and styles. In the 1980's the industry was supported by the reserve price scheme creating a false market and encouraging the production of large quantities of inferior quality product. Today we are faced with strong competition from artificial fibres in a world of centrally heated homes and office buildings and we must adapt to this new environment. Our future fibre must be of the highest quality able to be worn next to the skin and marketed as an elite and unique product. We believe that we shouldn't isolate ourselves from future markets by slipping into the trap of growing coarse , poor handling, inferior wools simply in order to fill bales. In this age of increasing reliance on computer driven data we feel it more important than ever to continue selecting for these higher quality, better processing fleeces.

2. Meat Production - This is an obvious one and it is here to stay. We believe the merino of the future must be a dual purpose animal and we feel well situated to take advantage of this situation. Our ongoing selection policy for carcass traits , combined with judicious and careful introductions of outside genetics from industry leading sires is paying dividends and have placed us in a great position to take advantage of what seems to be a permanent market trend.

3. Eco-Friendly Production - Non-Mulesing. This is an important market trend that large sections of the industry have been turning a blind eye to for some years. It has gradually been creeping up on us and is fast becoming a world wide movement. To remain productive we must move with these market forces rather than fight against them.

The Richmond phenotype allows us to produce a clean green product with limited chemical use and ethical animal husbandry. Our white waterproof wools grown on wrinkle free bodies have enabled us to cease jetting for body strike (we have not jetted adult sheep for 21 years) and our plain wrinkle free breeches have allowed us to stop mulesing, eliminating the process 20 years ago.

Throughout this time and despite much industry scepticism our production levels have actually increased.

HEALTH STATUS

- All sheep are vaccinated with Gudair vaccine despite there being no record of OJD on Richmond or on any neighboring properties.
- Richmond is a brucellosis free accredited flock.
- Richmond is free from virulent footrot.
- Annual fecal egg count tests reveal low egg levels and no sign of worm resistance.
- All animals are vaccinated twice with 6-in-1
- All sale rams were drenched with Tri-dectin on September 21st

EXPLANATION OF WOOL TERMS

FD - Fibre Diameter

SD - Standard Deviation - The measure in micron of the spread of fibres.
The lower the better.

CF% - Comfort Factor. Percentage of fibres less than 30 micron, the higher the better. The general rule is that less than 95% comfort factor may cause prickle when worn next to the skin.

NOTES ON WOOL TESTS

Richmond use OFDA fibre measurements as it gives a more accurate reading of higher quality wools being superior to laser scan at picking up ultra fine fibres below 9 micron. This also however has a negative effect on SD and CV% and will give a higher reading for these tests than laser scan simply because it has the ability to pick up a wider range of fibres.

Beware of sheep with low SD and CV% readings that have been shedded or fed specifically for sale or show preparation as these feeding regimes will often give the animal artificially low readings.

Richmonds breeding values for fibre distribution (SD and CV%) place them in the top 15% of all animals tested across the industry.

FEEDING

All sheep on Richmond are run under commercial conditions providing only limited supplementary feed. Our stud sheep graze the same country as our flock sheep and we are not interested in any form of artificial feeding or show ring activity.

No rams are shedded and will be run straight in from the paddock on sale day. It is and will continue to be our policy to concentrate 100% of our time and money towards improving genetics. Overfed rams with false growth rates are of no benefit to our clients. For this reason we strongly recommend the use of ASBV's for growth and carcass traits.

Richmond rams are genetically wired to breed sheep with growth and constitution.

FEEDING HISTORY OF 2023 SALE RAMS.

- The entire drop of rams have been paddock run in one mob from weaning through to sale day on mostly native pasture.
- No animals have been segregated or given special attention at any stage. This enables all young rams to be accurately compared against their peers at all stages of data collection.
- Following shearing in early April rams have been trail fed barley 2 to 3 times per week as a supplement to their pasture.
- Hay has been provided in the paddock to assist in supplying roughage and fibre.
- No rams have been inside a shed at any time of their life other than when they were shorn.

ASBV's

ASBV's (Australian Sheep Breeding Values) are estimations of an animal's true genetic merit. They are a more accurate guide than raw figures as they take into consideration many factors that may affect the true genetic value of an animal, such as differing birth dates and the hereditary influences of parents and grandparents. They also remove the differing environmental and management influences enabling us to make accurate cross flock comparisons.

ASBV - Explanation of terms

PWT - Post weaning weight. Estimates the growth difference in animals measured in kgs at 7 to 8 months of age. Our focus is on breeding animals that mature quickly and reach their optimum weight before they cut their teeth.

YWT - Yearling weight. Estimates the growth difference in animals measured in kgs at 12 months of age

YEMD - Yearling Eye Muscle Depth. Expressed in millimetres of muscle depth. Rams with a higher figure produce sheep with a higher yielding carcass and are generally more robust, better-doing animals.

YFAT - Yearling fat depth expressed in millimetres. Rams with a positive fat figure will hold their condition better and will bounce back quickly after stressful times.

YCFW - Yearling clean fleece weight. The difference in clean fleece weight expressed as a percentage.

YSL - Yearling staple length. The difference in staple length expressed in mm.

B/COV - Breech cover. Expresses the rams genetic potential for breeding bare skin area around the breech where a smaller Asbv figure represents a barer breech area.

L-DAG - Late dag. Expresses the genetic likelihood for dag where a more negative figure is desirable and should produce progeny with less dag.

SM – Sustainable Merino Index. This index effectively replaces the Dual Purpose (DP+) Index. It is aimed to enhance a production system with a balance of meat and wool with an additional focus on health and welfare traits. Fleece weight, Micron, Fertility and growth are the main contributing production traits combined with a significant emphasis on breech traits and egg count. The percentile bands for the new SM index significantly differ to the old DP+ Index where the top 10% percentile now sits at 153 compared to roughly 200 for DP+. Full percentile bands are shown in the table below.

SIRES OF SALE RAMS

BF-55 - (x Gun 295) Benefield Poll. A sire that throws great bodies with shape and structural integrity with long stapled heavy fleeces.

HP-273 – Hill Padua. Industry leading carcass sire displaying progeny with great shape and constitution

HP-1050 – Hill Padua. Great carcass traits combined with bold crimping heavy fleeces.

200099 - (x EL-62). High density wool sire with a very good bare breech area.

200112 - (x EL-62). A ram with great dual purpose traits. Above average fleece weights of very long and lustrous fibre combined with good muscling and early growth.

210230 - (x 190068) Dual purpose sire carrying the bare breech gene

210271 - (x 160110) Purchased by Mumblebone stud at our 2022 auction he possesses the rare combination of trait leading muscle with an elite level fibre.

ASBV PERCENTILES AS OF AUGUST 2024

	YWT	YFAT	YEMD	YCFW	YSL	SM
TOP 10%	11.5	1.5	2.5	29.9	18.4	153

TOP 40%	8.3	0.5	1.2	20.9	11.5	142
TOP 50%	7.5	0.2	0.9	18.7	9.9	139

THE INTRODUCTION OF EBCOV (BREECH COVER) AS A SELECTION TOOL

In recent years we have slowly seen the increased prevalence of the bare breech gene within our stud flock. The most exciting part of this development is the fact that despite the antagonistic relationship this trait has with fleece weight we have noticed that many of these bare breeches are more and more regularly appearing on dense woolled productive sheep and not the strippy, light cutters that they are more commonly associated with. With more producers every year looking to move towards non mulesing we feel it is important to help these breeders achieve their goals by both continuing to select for bare breeches.

At present breech cover data is collected by a limited number of stud producers giving it relatively poor linkage and lesser accuracy than some other more commonly used traits and because of this the bareness of some breeches may not seem to correlate with the ASBV figures. Over time and with more industry acceptance this situation should gradually improve. In the meantime when selecting for the bare breech gene it is advisable to visually assess the rams breech in conjunction with the use of ASBVs.

PURPLE is the top 5% of the MerinoSelect Database (07/09/2024)

BLUE is the top 10% of the MerinoSelect Database (07/09/2024)

GREEN is the top 20% of the MerinoSelect Database (07/09/2024)

YELLOW is the top 30% of the MerinoSelect Database (07/09/2024)
